

PETROTAC® is a self-adhesive paving strip membrane geotextile used to treat local pavement distress, including joints and cracks, and as a bridge deck membrane moisture barrier. PETROTAC® is easy to install and designed to extend the life of all paved areas, including highways, parking areas and airport pavements. PETROTAC® is cost effective and designed to protect pavements from moisture damage by layering the pavement and providing a stress absorbing interlayer, thereby extending the length of time before the development of pavement cracking.

Applications

- Local pavement distress
- Over moderate joints and cracks
- Highways, parking areas, airport pavements
- Waterproofing membrane for bridge decks

Features & Benefits

- Convenient self-adhesive strip membrane
- Easy peel-and-stick installation
- Protects pavements from moisture damage
- Provides moisture protection over localized failures
- Provides protection against moisture and reflective cracking
- Small rolls make it easy to handle and install
- Reduces the cost of bridge waterproofing

Savings & Advantages

PETROTAC® is a cost-effective pavement interlayer product that significantly lowers the life cycle cost of pavements. Smaller rolls make it easy to install on localized cracks and pavement failures.
